

# Fairy Lights Presentation

Light can become a wonderful **creative** and **artistic tool** in the hands of the right creator. One of the ways we love to create **unforgettable scenery** and **fascinating results** is the use of **FAIRY LIGHTS**. Below we will present to you what you need to know about this **amazing** type of lighting.

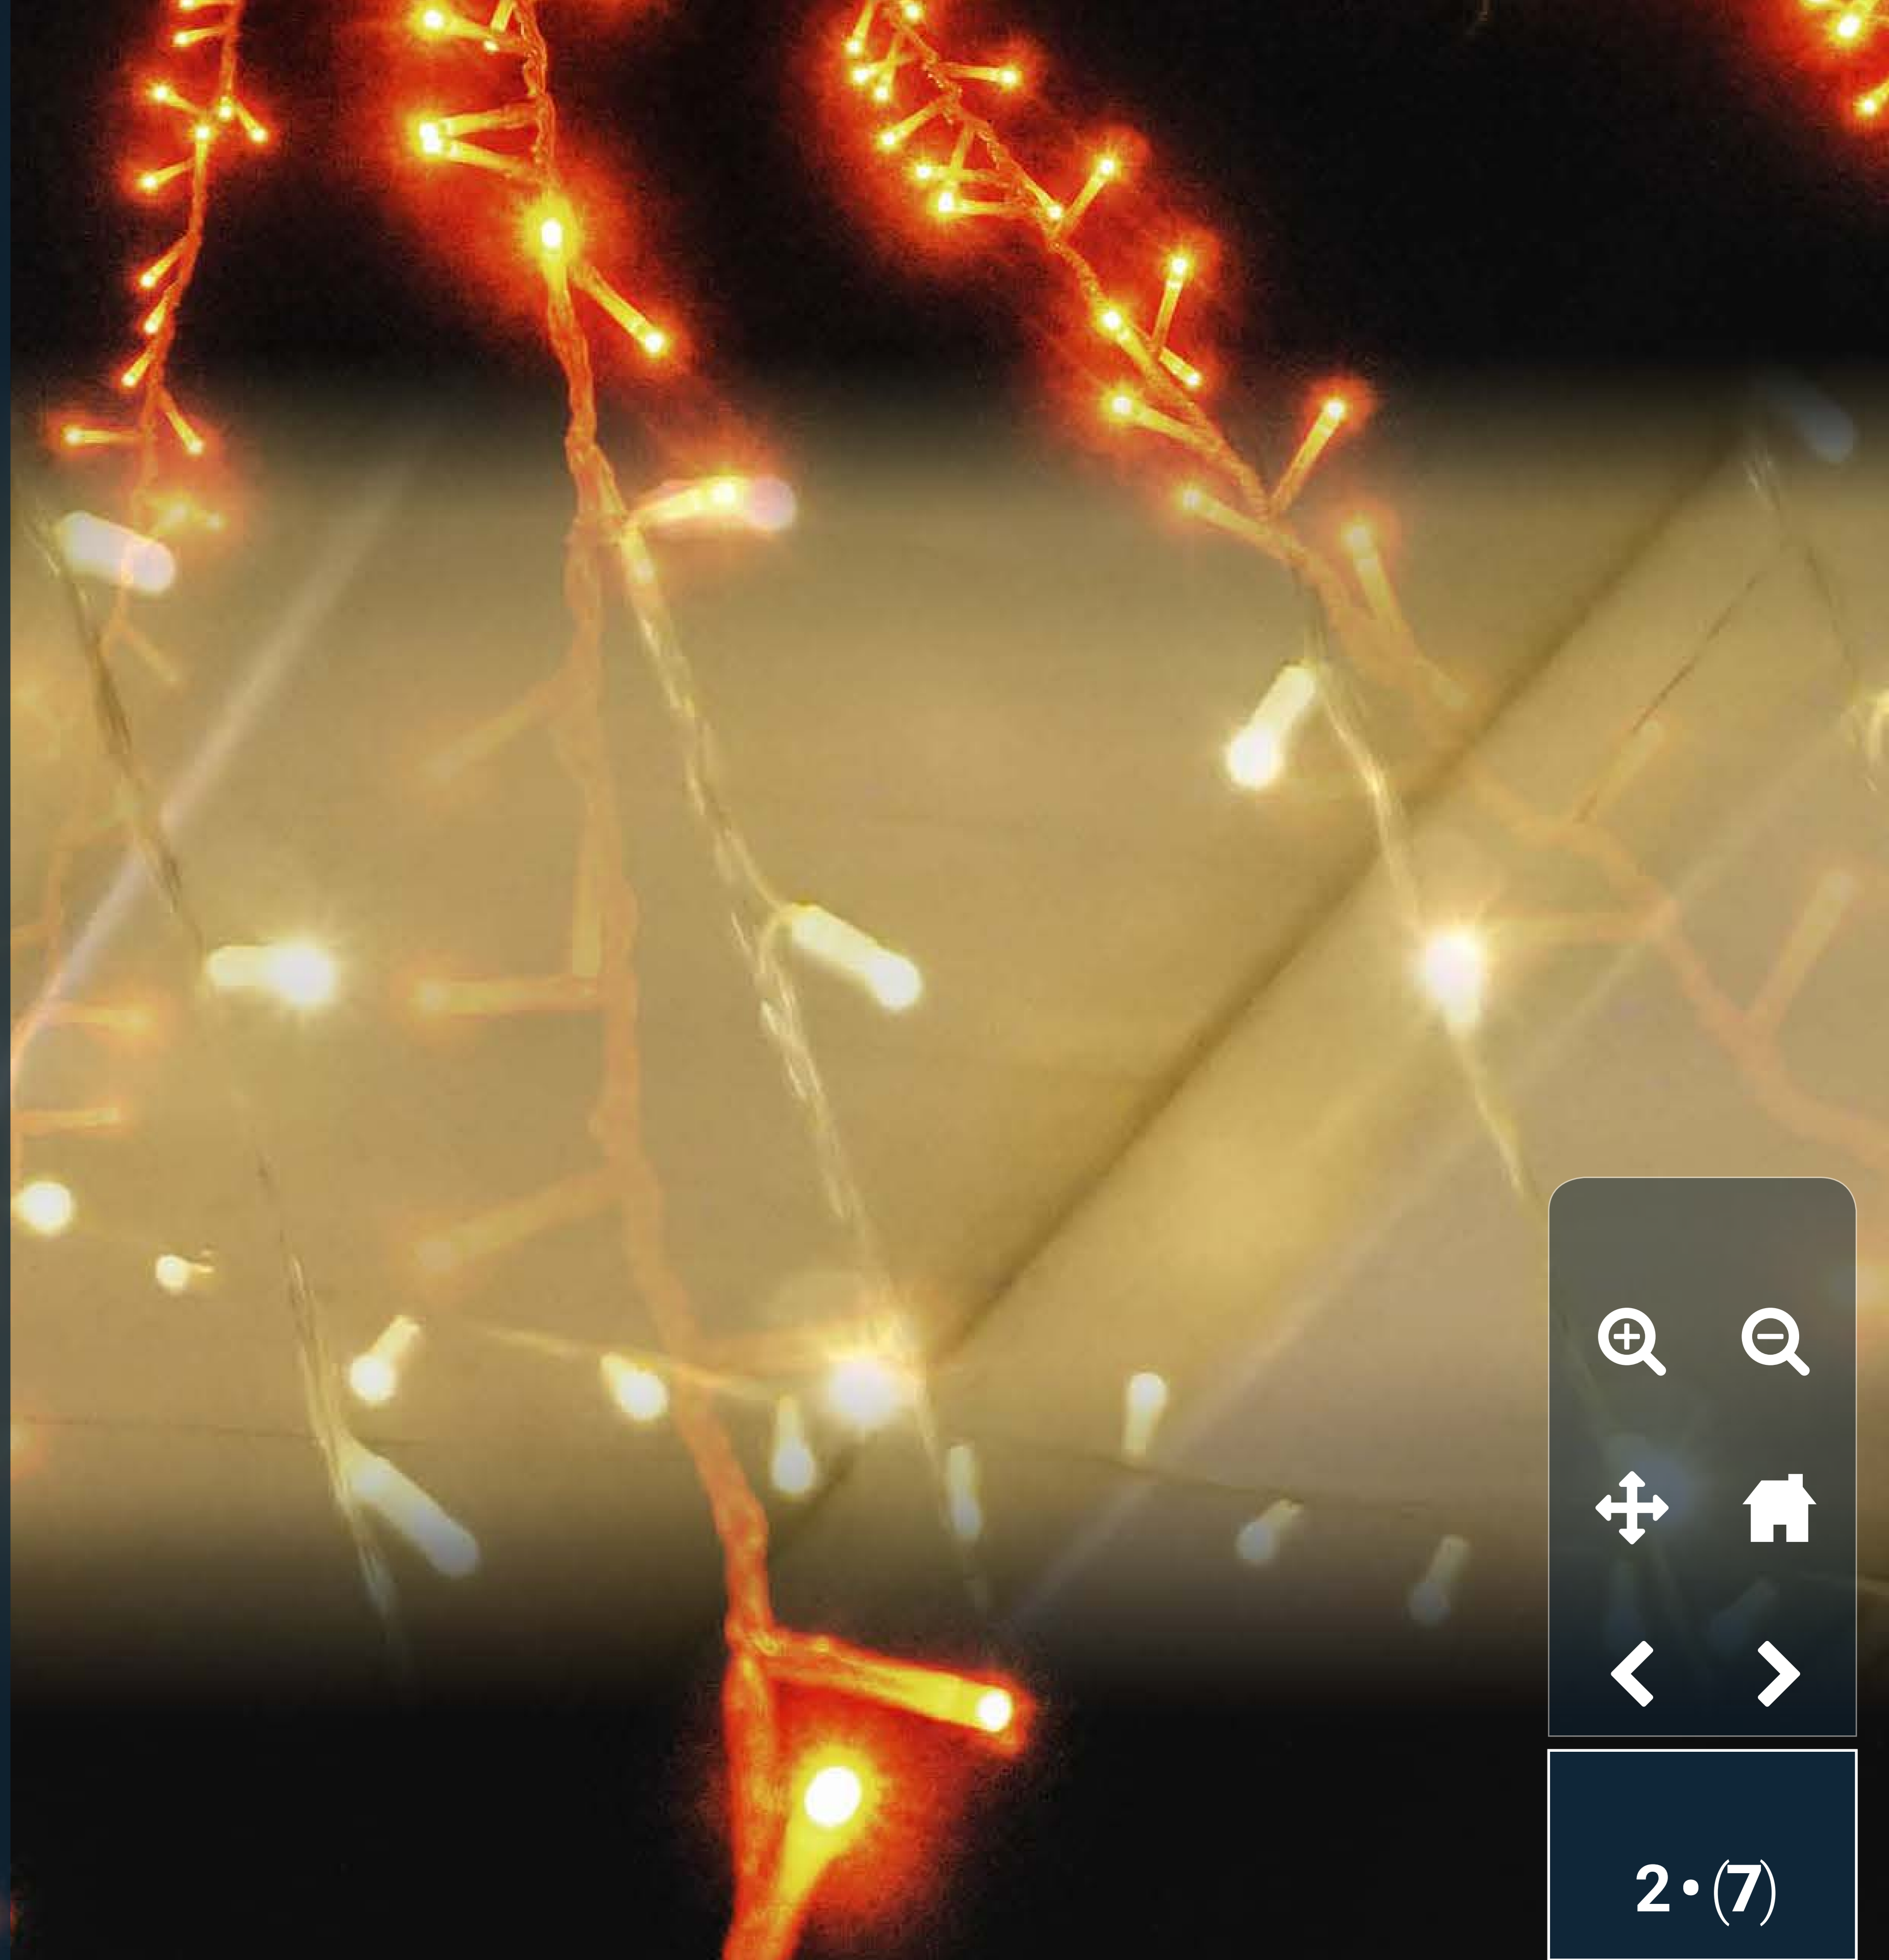

# The Truth About *Decorative Lighting*

Decorative lighting is a type of lighting that works for **two purposes** at the same time.

1. Lighten the space where it is placed
2. Highlight or complement the existing decoration by acting as a part of the decoration design.

In this presentation we present to you, the features and **applications** of the best seller in decorative lighting for the last 5 years. The **Fairy Lights**

**Let's Go!**

# About Fairy Lights

Fairy Lights have some features that may not be quite detectable in the photos you may have found on **Pinterest**. Some of these features are as follows

---

Their construction is exceptionally **flexible** and **elastic**. This enables us to do wonderful things with them.

Their weight is unbelievably **light**. For this reason they **do not require** particularly large structures for their support and suspension.

Their electricity consumption is **very low**. This is a great reason to avoid power outages and the use of sophisticated power distribution equipment.

Fairy lights are the ultimate **romantic** addition you could have to your wedding. Their warm white light is the epitome of romantic lighting.

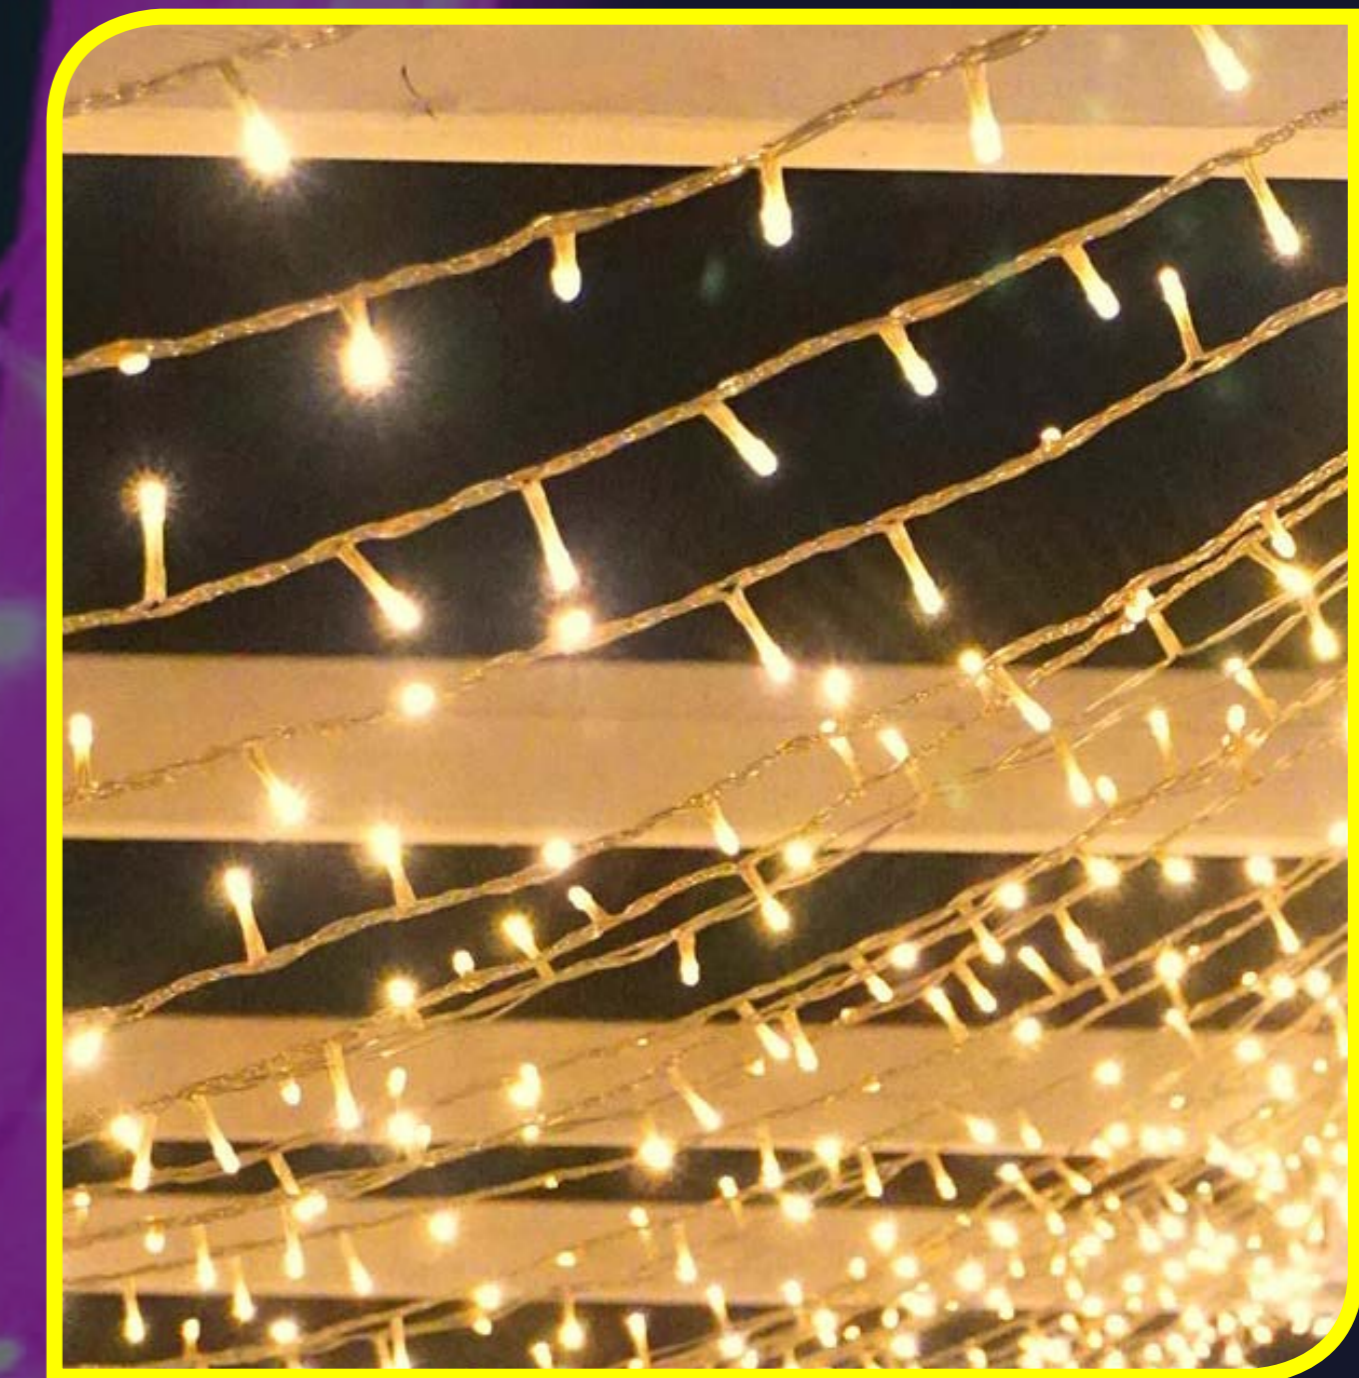

# Fairy Lights Hanging Applications

The most common way to use fairy lights is in a vertical layout. They can be used to form a backdrop or to cover a large vertical surface (such as walls).

For more sophisticated applications, the fairy lights can also be airborne, creating an “invisible ceiling” over the space they are mounted.

Whether in horizontal (suspended) or vertical layout, fairy lights are being supported with special mounts at almost any point (trees, railings, awnings, columns, frames, etc.). In case the wedding venue does not have existing points of mountings that we can use, we can provide our own.

So the possibilities are literally endless.

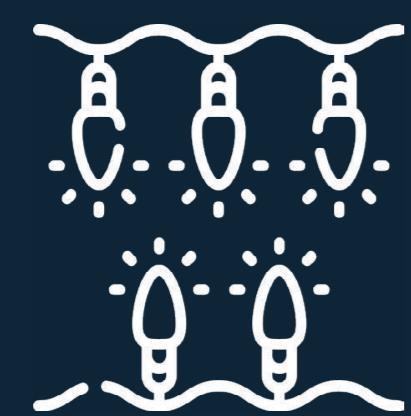

# Suspended Fairy Lights Applications

---

The horizontal layout of the fairy lights is achieved by spreading the lights in straight lines starting at one point and ending at another. By using many lines we achieve the well known «fairy tale» effect where the sky is filled with countless tiny lamps. The arrangement can be either symmetrical (following a specific design with equal spacing between the lines) or more abstract depending on the result we wish to achieve.

# Vertical Fairy Lights Applications

In a vertical layout, the Fairy Lights can also take the place of a curtain or partition. This application can also be done on walls, curtains, partitions or anywhere else. They can also work as a beautiful backdrop for the bridal table, the buffet or the table of wishes.

Their versatility also allows us to dress whatever we want with any possible density between the light lines. Because they give off almost no heat, they can also get inside fabrics. So you can cover any tree boles, pillars, plants, the gazebo or whatever else you wish.

# Various Fairy Lights Examples

See below some photos with the magic created by the unique fairy lights applications we designed for various weddings across Greece in the past.
