A GUIDE FOR COUPLES · 2026 EDITION

Dance Floors & Stages

Wooden floors, clear platforms, stages, pool covers and LED floors: what goes under your feet, and how we make any ground a place to dance.

BEFORE YOU CHOOSE

What's under your feet?

Any ground can become a floor. A garden, a gravel courtyard, a beach, even a swimming pool.

This guide explains the floors we build, what works on which ground, how big your dance floor should be, and how to make it your own. Share it with your planner and your venue.

1 m²

10 Good to know

OUR FLOORS

Four foundations for your day.

MAHOGANY OR OAK

Wooden dance floor

1 m² panels, assembled to any size: firm and never slippery. Can be covered partly or fully with transparent stickers.

CLEAR AND ELEVATED

Plexiglass platforms

Transparent platforms placed on the ground or raised up to 1.5 m, personalised with transparent vinyl.

FOR EVERY SPACE

Decks, platforms & stages

A raised dance floor, a ceremony stage, a reception platform: the answer for uneven ground.

WATER, MADE SOLID

Pool covers

Full or partial, any size or depth, finished in film, carpet or the original black.

START WITH YOUR GROUND

The ground decides the floor.

Our portable wooden floors are not levelled, so they need ground that is already completely flat. Everywhere else, we build up: stages and concert-grade platforms that stand level on their own.

FLAT TERRACE OR COURTYARD

Wooden dance floor

Laid straight onto any completely flat surface, in 1 m² panels.

GRASS

Wooden floor or a stage

A wooden floor if the lawn is perfectly flat; otherwise a stage or platform, levelled on its own legs.

GRAVEL

Stage or platform

Gravel is never truly flat, so we build a levelled deck above it.

SAND

Stage or platform

A raised, levelled platform, so heels never sink and the floor never moves.

SWIMMING POOL

Pool cover

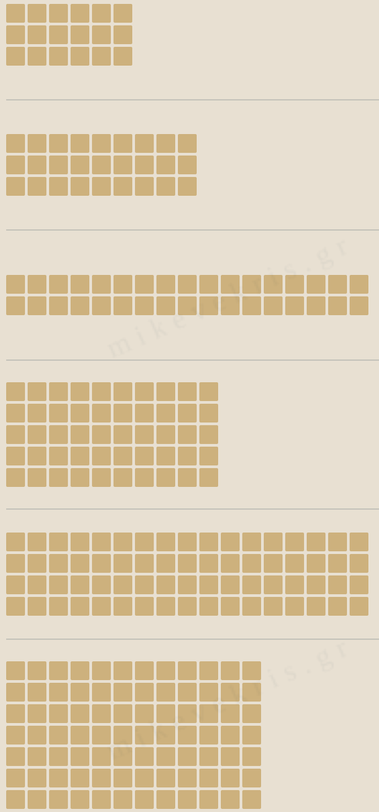

Full or partial cover, any size or depth, after a static study of the pool.

SIZING

How big should your dance floor be?

Our rule of thumb: **1 m² for every 3 guests**. Not everyone dances at once, and a floor that is slightly full feels like a party; one that is half empty never does.

The numbers are a starting point. We confirm the right size for your music, your venue and your guests in your proposal.

50 GUESTS	17 m² E.G. 3 × 6 M
80 GUESTS	27 m² E.G. 3 × 9 M
100 GUESTS	34 m² E.G. 2 × 17 M
150 GUESTS	50 m² E.G. 5 × 10 M
200 GUESTS	67 m² E.G. 4 × 17 M
250 GUESTS	84 m² E.G. 7 × 12 M

PERSONALISATION

Make it yours.

The wooden floor and the plexiglass platforms can be covered partly or fully with transparent stickers: your monogram, a pattern, your theme.

Surface wrapping

We print and apply high-quality decorative films to transform almost any surface: dance floors, tables, stages, bars and walls. Designed with you or your decorator, to match the rest of the day.

IMMERSIVE, PORTABLE

LED dance floors.

Modular LED floors, designed for immersive visual effects and synchronised with the rest of the lighting. Fully portable and adaptable to your layout, they lift the energy, and the photos, of any celebration.

POOL COVERS

Water, made solid.

A pool in the middle of the venue is often the best place for the party. We cover it fully or partially, at any size or depth, and finish it in film, carpet or the original black.

SAFETY FIRST

Every pool cover follows safety specifications, and starts with a static study and an on-site inspection.

ENGINEERING, NOT CARPETING

One of our most demanding services.

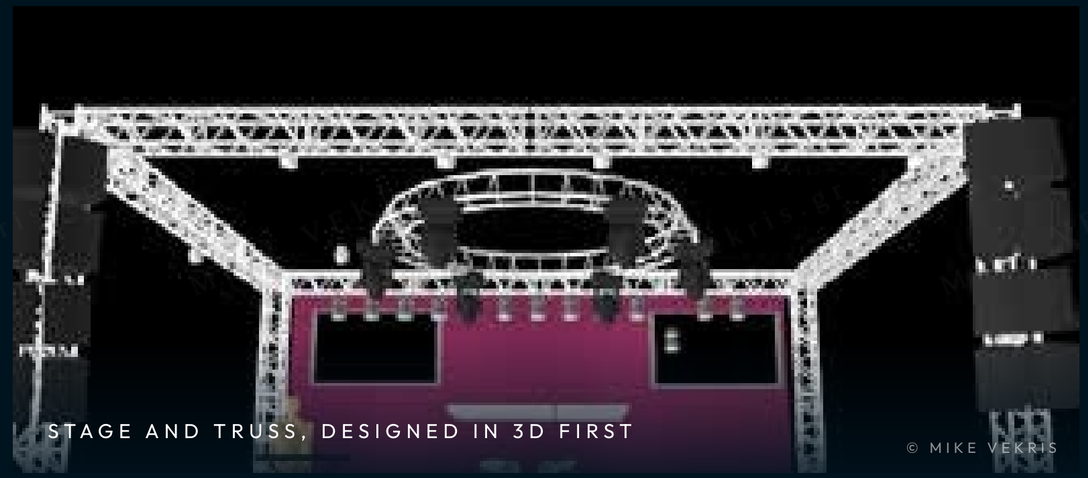

A floor that carries a whole wedding is serious engineering. It needs a specialised static study, sometimes an engineer's signature, complex logistics and heavy trucks. That is why every floor is designed, quoted and built individually, after we review your venue.

- Static study for every project
- An engineer's sign-off when required
- Heavy transport and a specialised crew
- Designed and quoted individually, never per square metre off a list

QUESTIONS

Good to know.

Is it safe to dance on a pool cover?

Yes. Every pool cover follows safety specifications, and starts with a static study and an on-site inspection.

Can you personalise the floor?

Yes. The wooden floor and the plexiglass platforms can be covered partly or fully with transparent stickers: your monogram, a pattern, your theme.

How large can you go?

Each floor is sized for your celebration, within what is safe and practical for your venue. Tell us about your space and we will design what fits.

How is it priced?

Every floor is designed and quoted individually, after we review your venue, never per square metre off a list.

Can the dance floor go on grass or gravel?

Yes, as long as the ground is completely flat: our portable wooden floors are not levelled. On uneven ground we use stages and concert-grade platforms instead.

How high can a platform go?

Our plexiglass platforms can sit on the ground or be raised up to 1.5 m.

Can you build stages for the DJ, a band or the ceremony?

Yes. From elevated DJ booths to ceremony stages and band risers, designed and installed to suit your venue.

What do you need from us?

Photos or plans of the space, your guest count and where you would like to dance. We take it from there.

YOUR FLOOR, DESIGNED AROUND YOUR VENUE

Let's lay the groundwork.

Tell us about your venue and your guests, and we'll design the floor around them.
